

Beta Tester Guide

How to download the software and report bugs on GitHub, even if you have never used GitHub before.

Thank you for helping us test THREE Desktop. We use a website called **GitHub** for two things: giving you the software to download, and collecting your bug reports in one organized place. You do not need to know anything about programming to use it. This guide walks you through everything.

Everything happens on this one page. Bookmark it:

github.com/Matter-and-Form/THREE-Desktop

When you open that page you will see a short manual for the beta (the “README”) filling most of the screen. The two other things you will use are on that page too: **Releases** (on the right side) is where downloads live, and **Issues** (a tab at the top) is where bugs are reported.

1 Create a free GitHub account (one time, 2 minutes)

You can *download* the software without an account, but you need one to *report bugs*. So set it up once and be done:

1. Go to github.com/signup
2. Enter your email address, choose a password and a username.
3. Confirm the code GitHub emails you. That is it. Free plan, no payment details, ever.

2 Download and install THREE Desktop

1. Open github.com/Matter-and-Form/THREE-Desktop
2. On the right-hand side, click **Releases**.
3. The newest version is at the top. Under **Assets**, click the file for your computer:

Your computer	File to download
Windows 10 or 11	THREE-Desktop-<version>-win-x64.exe
Linux (any distribution)	THREE-Desktop-<version>-linux-x86_64.AppImage

Linux (Ubuntu / Debian)	THREE-Desktop-<version>-linux-amd64.deb
-------------------------	---

4. **Windows:** run the downloaded .exe and follow the installer.
5. **Linux AppImage:** right-click the file, choose Properties, allow executing it as a program, then double-click it. No installation needed.
6. **Linux deb:** double-click to install through your software center, or run

```
sudo apt install ./THREE-Desktop-<version>-linux-amd64.deb
```

WINDOWS SAYS “PROTECTED YOUR PC”?

Our installer is digitally signed by Matter and Form Inc., but because the app is new, Windows SmartScreen can still show a blue warning while it builds trust. Click **More info** and check that the publisher says **Matter and Form Inc.**, then click **Run anyway**. If the publisher says anything else, do not run it and tell us.

3 Found a bug? Report it

A bug is anything broken, confusing, or not behaving the way you expected: crashes, errors, a scan that looks wrong, a button that does nothing. When in doubt, report it. We would rather hear about something twice than not at all.

1. Make sure you are signed in to GitHub.
2. Go to `github.com/Matter-and-Form/THREE-Desktop`
3. Click the **Issues** tab at the top of the page.
4. **Have a quick look at the list first.** If someone already reported your bug, open it and add a comment saying it happens for you too, along with anything different about your setup. That is genuinely helpful.
5. Otherwise click the green **New issue** button and choose **Bug report**.
6. A form appears. Fill in the boxes: which version you are running, whether you are on Windows or Linux, your computer's specs, what happened, and what you did right before it happened.
7. **Attach your logs** (see below). This is the most useful part of the whole report.
8. Click **Submit new issue**. Done.

ATTACHING LOGS: TWO CLICKS IN THE APP

In THREE Desktop, open the **Menu** and choose **Export Logs**. The app saves a single zip file. Drag that file from your file manager into the “Exported logs” box of the bug form and it uploads automatically. The zip contains technical logs from the app and the scanner. It lets us see exactly what went wrong without asking you twenty questions.

A good bug report in three sentences: *“I merged two scans and clicked Texture. The app showed a spinning wheel forever and I had to close it. It happens every time with the attached project.”* Plain language is perfect. You never need technical vocabulary.

4 What happens after you submit

- We read every report. You may get a reply asking a follow-up question, and GitHub will **email you** when we respond, so keep an eye on the inbox you signed up with (check spam once, too).
- To answer, just open the email's link and type a comment under the issue.
- When the bug is fixed, we close the issue and the fix ships in the next release. Which brings us to...

5 Staying up to date

During the beta we release new versions often. When we ask you to update, or when a fix for your bug ships: go back to **Releases**, download the newest file, and install it over the old one. Your projects and settings are kept. Please always mention which version you are on when reporting; it is shown in the installer filename.

6 Ideas and everything else

Have a feature idea? Use **New issue** and pick **Feature request**. For anything that is not a bug or an idea (questions, hardware trouble, order issues), email us at info@matterandform.net instead. That way the issue list stays focused and nothing gets lost.
